Mumps Vaccine
Outbreaks of mumps on college campuses began to appear in December 2005 in Iowa. The age group of 18 years old to 24 years old seems to have had the highest incidence. Other campuses in the mid-west have also reported outbreaks. We have not had an outbreak at Baylor University but remain vigilant and want to move proactively. All students are encouraged to check their immunization records to make sure they have had two doses of MMR (measles, mumps, rubella) vaccine or other acceptable evidence of immunity. Students who have had one MMR and only received a second measles vaccine should receive a second MMR. This can be given at the Baylor Health Center, the County Health Department, or one’s personal physician. For additional information or to set up an appointment for immunization, contact Health Services at 254-710-1010.
