VPN – Virtual Private Network

VPN is a secure method of accessing Baylor systems from off-campus locations. Information Technology Services has implemented VPN for faculty and staff.

Students (with a faculty sponsor) who have a need for VPN should contact StudentVPN@baylor.edu

Installing and Connecting with Cisco Any Connect VPN Client for Windows and MAC

Before installing you should have a BEARID and password and a working internet connection with web browser (Internet Explorer, Firefox or Safari)

Open your web browser and type http://babel.baylor.edu in the web address box, press enter and you will see the following screen:

Enter your BEARID and PASSWORD and click the Login button
Click **Install** button and **Next** to accept defaults for the software. Click **Yes** if you get a security prompt. If prompted to load Java Runtime software, install it also.

**Windows OS**

When the installation is complete you will receive the following screen on the PC.
To disconnect from the VPN on PC running Windows, right click on the Cisco AnyConnect VPN icon in your system tray, select OPEN, click the Disconnect button.

MAC OS

When installation is complete you will see the following screen on the MAC

To disconnect from VPN on MAC, click the Disconnect button or click the Cisco AnyConnect VPN icon on the menu bar and click Disconnect.

Note: if you are on campus and connect through VPN, your network connection will fail. You must disconnect to continue to use your network connections on campus. The VPN connection is strictly for use outside of the Baylor network.

To connect again in the future type http://babel.baylor.edu in your web browser address line and login.
