APPENDIX II

Undergraduate Summer Science Research Program 2015

For the 2015 summer session, 46 students applied to the Undergraduate Summer Science Research Program and nine were accepted and participated. Three students worked in chemistry/biochemistry; three in psychology/neuroscience; two in biology; and one worked in CASPER/physics.

After two semesters at Baylor, seven of the student remain as science majors; one switched to family and consumer sciences; and one is a Baylor Business Fellow. The seven science majors complete an average of 32 Baylor hours with an average GPA of 3.79. One student has continued to work on an undergraduate research project in psychology.

We will continue the program for the 2016 summer session. This year 38 students applied and we plan to have nine students on campus during the second summer session. The average math SAT/ACT score of the group is at the 96th percentile.
