

Undergraduate Internships

Albert Einstein College of Medicine Summer Undergraduate Research Program

Each summer the Einstein Summer Undergraduate Research Program (SURP) brings together 50 college students each summer for a one-of-a-kind opportunity to conduct original research in a laboratory at one of the world's top-ranking scientific institutions. The program is designed for undergraduates with a strong background in science who are considering a research career.

Website: <http://www.einstein.yu.edu/education/phd/the-summer-undergrad-research-program.aspx>

Contact: surp@einstein.yu.edu

Deadline: February 1, 2015

Undergraduate Summer Research Opportunities

The Graduate Studies Program at the Albany Medical College is offering a research program for undergraduates interested in furthering their training in science, and in exploring career options in research. Students will have their own research project, be advised by a faculty mentor who will provide guidance and insight, and will be able to take advantage of a variety of enrichment activities designed to illuminate the profession of a researcher in the biomedical sciences.

Contact: graduate-studies@mail.amc.edu

American Chemical Society Nuclear and Radiochemistry Undergraduate Summer Schools

The Division of Nuclear Chemistry and Technology of the American Chemical Society is sponsoring two intensive six-week summer schools in nuclear and radiochemistry for undergraduates. Funding is provided by the U.S. Department of Energy.

Website: <http://chemistry.missouri.edu/nucsummer/>

Contact: Professor Paul Mantica at mantica@msu.edu

American Society for Microbiology-Microbiology Undergraduate Research Fellowship

The Microbiology Undergraduate Research Fellowship is a 10-week program in the summer intended for undergraduate students from underrepresented and historically excluded groups who wish to, and have demonstrated the ability to pursue graduate careers (Ph. D. or M.D./Ph.D.) in microbiology. Students will have the opportunity to conduct full-time research with an American Society Microbiology member at their home institution or at a host institution.

Website: <http://www.asm.org/index.php/fellowships/25-education/students/7827-asm-undergraduate-research-fellowship-asm-urf>

Contact: fellowships-careerinformation@asmusa.org

American Society for Microbiology Undergraduate Teaching Fellowship

The American Society for Microbiology offers fellowships for student interested in science education. These opportunities allow them to design and implement an outreach program in a local school or community setting connected to APU. Students eligible for this program must already be involved in an educational outreach program. This program offers students a \$2,500 stipend for 12 weeks or 150 hours, \$500 in material support, and \$1,000 for travel to present the results of the project at the annual meeting.

Website: <http://forms.asm.org>

Amgen Scholars Program

This is a competitive summer research program that connects students with researchers on one of ten college campuses. Students who are interested in pursuing a Ph.D. or M.D/Ph.D. program after graduation, are enrolled at a university for the following fall semester, have completed three semesters of college, and have a minimum GPS of 3.2 are eligible to apply.

Website: <http://www.amgenscholars.eu>

Contact: Amgen Scholars U.S. Program Office at asp-mpo@mit.edu

Apple Internship Program

At Apple, interns are an important part of the team. Whether students sign on for a 12-week summer schedule or a 3 to 6 month co-op for school credit, they are in for some amazing real-world work experience. And they will be on a fast track for landing a full-time job at Apple after graduation.

Website: <http://www.apple.com/jobs/students.html#internship>

Argonne National Laboratory Student Research Participation Program

At Argonne, college and university students may obtain research experience through the Student Research Participation Program during the summer and academic year. A student will generally spend the first week of his or her Argonne experience with a staff member devising a research strategy and attending mandatory safety classes. For the next few weeks, the supervisor will provide considerable program assistance and guidance. Subsequently, the student will be expected to complete a research abstract and submit a final research report.

Contact: DEP_webmaster@dep.anl.gov Arizona Heart Foundation

Baylor College of Medicine Summer Medical and Research Training Program

The Summer Medical and Research Training (SMART) Program is for undergraduate students who are interested in exploring a career in scientific research. All Ph.D.-oriented candidates are encouraged to apply. Up to 100 students are recruited for the SMART Program from across the nation. The program offers nine paid weeks of biomedically related research in a broad range of areas, daily seminars designed for undergraduates, free SMART GRE prep workshops, and career development activities.

Website: <http://www.bcm.edu/smart/>

Contact: smart-program@bcm.edu

Bettis Atomic Power Laboratory Summer Intern Program

Each year, Bettis hires approximately 30 students for its summer intern program. Laboratory internships offer students a unique opportunity to participate in the important work done at Bettis and a chance to work with some of the finest technical people in the country.

Website: <http://www.bettislab.com/internprogram.html>

Contact: interns@bettis.gov

Caltech Minority Undergraduate Research Fellowship

Caltech's Minority Undergraduate Research Fellowship (MURF) program provides support for talented undergraduates to spend a summer working in a research laboratory on the Caltech campus. The MURF program aims to increase the representation of underrepresented students (such as African American, Hispanic, and Native American, females who are underrepresented in their discipline, and first generation college students) in science and engineering Ph.D. or M.D./Ph.D. programs, and to make Caltech's programs more visible to students not traditionally exposed to the institute. The program supports Caltech's commitment to training a diverse set of science, technology, engineering, and mathematics leaders.

Website: <http://murf.caltech.edu>

Contact: Candace Rypisi at candacer@caltech.edu

Caltech Summer Exchange Program

The Summer Undergraduate Research Fellowships Exchange Programs were developed in order to enhance and broaden students' undergraduate experiences by giving them the chance to live in another culture, conduct research in a different academic/research environment, and prepare for careers that will most certainly involve international cooperation and collaboration.

Website: http://sfp.caltech.edu/programs/exchange_programs

Contact: sfp@caltech.edu

Cardiovascular Summer Students Program

In 1971, the Arizona Heart Foundation established a program designed to motivate and inspire college students considering a career in medicine. The Cardiovascular Summer Student Program, a pro bono six-week program, is conducted annually during June and July. The class size is limited to eight students to ensure a quality educational experience. Students attend didactic lectures and participate in clinical rotations at both the Arizona Heart Institute and Arizona Heart Hospital.

Case Western Reserve University Summer Undergraduate Research in Pharmacology

The Summer Undergraduate Research Program provides “hands on” research experience for sophomores and juniors in the area of molecular pharmacology. Although the projects will vary, each is related to a common theme- elucidation of the molecular. Students spend at least 10 weeks during the summer working on a research project in a lab selected according to their interests. In addition to research, weekly seminars are presented to acquaint the students with the broad range of research projects in the pharmacology department.

Center for Enabling New Technologies Through Catalysis Undergraduate Summer Research Program

The Center for Enabling New Technologies Through Catalysis (CENTC) is a NSF Center for Chemical Innovation that focuses on the use of catalysis to develop new chemical processes that will have significant societal impact. Research projects include devising new ways to produce clean, efficient fuels and ways to convert renewable resources to fuels and useful chemicals. During the summer, undergraduate fellowships are available to conduct research at one of 13 locations of the CENTC. The program is 10 weeks long, and fellows will receive a stipend and compensation for travel and housing.

Community Outreach Prevention and Education (COPE) Internships

COPE Health Solutions is a leading health care corporation based in Los Angeles, California. We partner with hospitals, physician groups, health plans, clinics and other health care organizations to help them achieve visionary, market relevant health care solutions. Corporate internships as well as Clinical and Health Care Management internships are available. The corporate internships serve two purposes: First, to identify top talent for potential full-time positions at COPE Health Solutions and second, to provide meaningful experiences in the field, helping you learn first-hand through real-world projects and assignments. The Health Care Management internships provide unprecedented direct patient care experiences in clinical settings.

Committee on Institutional Cooperation Summer Research Opportunities Program

The Summer Research Opportunities Program (SROP) is a gateway to graduate education at CIC universities. The goal of the program is to increase the number of underrepresented students who pursue graduate study and research careers. SROP helps prepare undergraduates for graduate study through intensive research experiences with faculty mentors and enrichment activities.

Deadline: February 10, 2015

Debakey Summer Surgery Program

The Michael E. Debakey Summer Surgery Program encourages the development and interest of well-qualified undergraduate students who are considering a medically oriented career. The program provides students with an opportunity to work with faculty, surgical residents, medical students, and nurses in various teaching hospitals. Students become familiar with the hospital environment, the operating room, and the lifestyle of a surgeon. They are expected to become an integral part of their surgical teams by participating in rounds, surgery, and conferences.

Website: <https://www.bcm.edu/departments/surgery/education/students/summer-surgery-program>

Deadline: February 5, 2015

DiscoverGenomics! Science Education Program

The J. Craig Venter Institute (JCVI) is a not-for-profit research institute dedicated to the advancement of the science of genomics, the understanding of its implications for society, and the communication of those results to the scientific community, the public, and policymakers. The DiscoverGenomics! Science Education Program provides opportunities to inspire young scientists and other science professionals to work in all areas of the institute. Interns are assigned to a mentor who is a member of the institute's faculty or senior staff. A research program/work experience is tailored to each participant's education level and capabilities. Students doing research at JCVI during the fall or spring semester should apply to receive college credit. Interns are required to present a summary of their research/work experience to the institute's staff at the conclusion of their internship.

Website: <http://www.jcvi.org/cms/education/internship-program>.

Contact: internships@jcvi.org

Elizabeth Glaser Pediatric AIDS Foundation

The Elizabeth Glaser Pediatric AIDS Foundation seeks to prevent the transmission of HIV to children through advocacy, funding research, and treatment and prevention. For students who are interested in public health, particularly in the area of HIV/AIDS, there are internships available in Washington D.C., for one semester during the academic year.

The Endocrine Society Summer Research Fellowships

The Endocrine Society offers Summer Research Fellowships to encourage promising undergraduate students, medical students and first year graduate school students to pursue careers in endocrinology. The Society provides a stipend to each student award recipient to participate in research projects under the guidance of a Society member for 10 to 12 weeks during the summer. Recipients are invited to attend the Society's Annual Meeting and Expo and will receive complimentary registration, airfare, and lodging and per diem for the duration of the meeting. ENDO 2015 will be held in San Diego, California.

Deadline: Applications OPEN in December 2014; Deadline is February 6, 2015

IBM Extreme Blue Program

Once selected into the program, you will become part of a team working in one of the 15 Extreme Blue labs worldwide. Your team's challenge is to develop the technology and business plan for a new product or service that addresses an existing market challenge. Unlike other intern programs that may relegate you to work on outdated technology, the Extreme Blue teams work on leading technology that helps grow your skills and evolve you into a more attractive candidate in the technology field. Interns in this high-performance environment get to roll up their sleeves and work with "hot" technologies such as Cloud Computing, Web 2.0, and petabyte-scale data analysis.

International Research Experience for Undergraduates

The ACS International Research Experience for Undergraduates (IREU) exchange program gives undergraduate chemical science students an opportunity to pursue research at universities in France, Italy, Germany, the United Kingdom, and the United States. Participating institutions are recognized as top producers of scientific knowledge. IREU students spend 10 weeks working on frontier chemistry research projects under the guidance of faculty members and graduate student mentors to sharpen scientific skills, develop collaborations with scientists abroad, and experience the life and culture of a foreign country.

Website: <http://portal.acs.org>

Contact: ireu@acs.org

The Jackson Laboratory Summer Student Program

The Summer Student Program is designed to help students understand the nature of research science. The emphasis of this program is on methods of discovery and communication of knowledge, not the mastery of established facts. Under the guidance of a mentor, students develop an independent research project, implement their plan, analyze the data, and report their results. At the end of the summer, students present their findings to researchers, peers, and parents.

Website: <http://education.jax.org/summerstudent/>

Contact: Jon Geiger at jon.geiger@jax.org

Jet Propulsion Laboratory Research Apprentices Program

The Research Apprenticeship Program is designed to allow experienced and qualified students to participate in research areas' activities at the Jet Propulsion Laboratory (JPL). Because JPL missions involve major engineering design and produce a huge amount of scientific data, a pool of high-quality student research apprentices can be of considerable help in carrying out the engineering and scientific work on these projects.

Website: <http://siri.jpl.nasa.gov>

Contact: Richard Alvidrez at Richard.E.Alvidrez@jpl.nasa.gov

Jet Propulsion Laboratory Student Independent Research Intern Program

The Student Independent Research Intern Program is organized to give students real-life work experience as a component of their academic program, ones that can help them make career choice and, if they decide to go into some kind of technical work, help them chart future steps in their education.

Website: <http://siri.jpl.nasa.gov>

Contact: SIRIProgram@jpl.nasa.gov

John Hopkins University Applied Physics Laboratory

The Applied Physics Laboratory offers science and engineering internships each summer. The program provides practical work experience and an introduction to applied physics. Students spend the summer working with APL scientists and engineers, conducting research, developing leadership skills, and growing professionally. Interns work on projects across the laboratory in every technical department, and they have the opportunity to network throughout the summer at receptions, social events, seminars, and workshops.

Website: <http://www.jhuapl.edu>

Contact: Applied Physics Laboratory's contact page

John Hopkins University Diversity Summer Internship Program

The Diversity Summer Internship Program (DSIP) was established to provide an independent research experience in biomedical and/or public health research to undergraduate students under the mentoring of established John Hopkins researchers. During the 10-week program, interns work one-on-one with faculty on research projects in their field of interest and attend a health science seminar series.

Reasons To Believe

Volunteer apologists are lay-people and professional who have been trained by Reasons to Believe (RTB) to use the ever –increasing evidence coming out of the world of science that continues to prove the existence of the God of the Bible as the only credible candidate for the creator of the universe. These people represent a vital part of spreading the RTB message on a grass roots level. Part of RTB’s philosophy is that God has provided us with the dual revelations of His truth through the words of the Bible and the facts of nature. Volunteer apologists help other effectively use the ongoing discoveries made in science providing evidence for faith in God of the Bible and to effectively communicate these discoveries to both skeptics and believers. They represent an essential part of forwarding the mission of the ministry of Reasons to Believe.

Research & Discover Summer Internship

Research & Discover summer internships are available to students ending their junior year of college. The internships requires relevant coursework in the Earth sciences (environmental studies, biology, chemistry, mathematics, geology, or other Earth sciences), strong academic records, and an interest in experiencing advanced research in Earth, ocean, and atmospheric sciences.

Research Experiences for Undergraduates (REU) at Baylor University: Astrophysics and Space Science

CASPER's NSF REU Program offers outstanding undergraduates an opportunity for active research participation with Baylor University faculty in the Center for Astrophysics, Space Physics & Engineering Research or the Baylor University Physics Department.

Program Specifics:

- Ten-week program beginning around the end of May and ending around the beginning of August.
- REU Fellows are paid a \$5000 stipend, \$1000 housing allowance and \$400 toward travel expenses.

Website: <http://www.baylor.edu/casper/index.php?id=83937>

Contact: Sherri_Honza@baylor.edu

Deadline: February 23, 2015

REU at Bigelow Laboratory: Gulf of Maine and the World Ocean

Bigelow Laboratory's National Science Foundation-funded Research Experience for Undergraduates Program offers undergraduates the opportunity to work closely with scientists on current research projects. Directed by senior research scientists Dr. Rick Wahle and Dr. David Fields, the 10-week program is designed to give students a meaningful research experiences with an emphasis on hands-on, state-of-the-art research methods and technologies.

Website: <http://www.bigelow.org/education/reu/>

Contact: Rebecca Fowler at reu@bigelow.org

REU at Chicago Botanical Garden: Plant Biology and Conservation

REU interns experience all aspects of plant biology and conservation research starting with the experimental design, data collection and analysis, through to presenting the results in a symposium at the end of the internship. Interns also participate in field trips and workshops. REU interns are paired with Chicago Botanical Garden and Northwestern University scientists to participate in a variety of research fields.

Website: <http://www.chicagobotanic.org/internship/REU.php>

Contact: Dr. Louise Egerton-Warburton at
lwarburton@chicagobotanic.org

REU at Drexel University: Engineering Cities

This program provides cutting-edge opportunities in the emerging field of urban engineering. Students will conduct research closely with faculty mentors on some of the most pressing engineering problems facing the rapidly growing urban world. In addition to their research, students will participate in a lecture series on engineering ethics, and travel to Washington, D.C., to learn about urban policymaking.

REU Indiana University: Animal Behavior

The REU Program in animal behavior brings about 10 undergraduate students to Indiana University each summer to engage in animal behavior research. The program offers a unique opportunity for talented undergraduates to spend the summer doing state-of-the-art research and to gain valuable skills while exploring career opportunities in the sciences.

Website: <http://www.indiana.edu/~animal/reu/>

Contact: lisummer@indiana.edu

REU at John Hopkins University Laboratory: Materials Research Science and Engineering Center

Each summer, the Materials Research Science and Engineering Center (MRSEC) at John Hopkins University (JHU) provides support for six to eight undergraduates to spend approximately 10 weeks doing materials research in one of its laboratories of the John Hopkins University MRSEC, either at JHU, Brown University, or Carnegie-Mellon University. Under the guidance of the MRSEC faculty in physics, materials science and engineering, students conduct research in such topics as nanowire structures, nanoparticle self-assembly, half-metallic ferromagnets, spin-valve structures, and nanocrystalline metals and alloys.

REU at Lehigh University: Summer Program for Undergraduate Physics Majors

Undergraduate physics and engineering majors currently in their sophomore or junior year are invited to apply to the Lehigh University Summer Undergraduate Research Participation Program in physics. This year, the department of physics at Lehigh University has again been selected by the National Science Foundation as a Research Experiences for Undergraduates site. In addition, a number of Sherman Fairchild Scholarships for research in solid state studies and electrical engineering are also available. The Lehigh REU program is intended for students who plan to pursue graduate study in physics or related fields. Participants will receive \$475 per week for a 10-week program in one of a variety of current research areas at Lehigh.

Contact Professor John Huennekens at jph7@lehigh.edu

REU at National Nanotechnology Infrastructure Network: Nanotechnology

The National Nanotechnology Infrastructure Network Research Experience for Undergraduates (NNIN REU) Program is designed to give undergraduate students an introductory research experience in nanotechnology. This summer a total of approximately 70 students are hosted for a 10 week program, spread across the 14 NNIN facilities. Each student will work on an independent research project within their area of interest, using the advanced resources of our laboratories. Because of the breadth of expertise across these sites, we are able to offer exciting nanotechnology research projects across the spectrum of nanotechnology fields: Electrical Engineering, Materials Science, Chemistry, Chemical Engineering, Physics, Mechanical Engineering, Biology, and Biomedical Engineering.

REU at Texas A&M University: Biochemistry and Biophysics

With support from the NSF-REU grant program and the College of Agriculture and Life Sciences, the Department of Biochemistry and Biophysics offers an opportunity for undergraduate students to participate in a 10-week intensive summer research program during the summer. Under the direction of our faculty, students will join a laboratory team to conduct research in modern biochemistry, with wide-ranging possibilities in structural biology, molecular genetics, genomics, enzymology or biophysics (faculty research). Students will participate in weekly meetings in order to explore the diversity of research opportunities in this vibrant field, gain experience in critical reading of biochemical research papers, discuss research ethics and to learn effective oral and written presentation skills. In addition, opportunities for social activities away from the laboratory will be provided on weekends. Financial support will include a stipend of \$5250 in addition to living expenses on campus, and some assistance with travel expenses.

REU at UCI: Summer Fellowships in Climate and Biogeochemistry Department of Earth Science

This nine-week summer fellowship program enables eight undergraduates to conduct scientific research in conjunction with a faculty member in the department of Earth system science. The program theme is biogeochemical cycling and climate change, with diverse research projects involving studies of atmospheric chemistry, ecosystem dynamics, and air-sea and air-land interactions in the context of a changing climate. Through lecture series and reading group activities, students gain an understanding of the Earth system and insights into cutting-edge research taking place within the department. The program provides a stipend of \$3600, travel assistance, research course credit, and room and board.

REU at University of Delaware: College of Earth, Ocean, and Environment

Supported by a grant from the National Science Foundation's Division of Ocean Sciences, this REU (Research Experience for Undergraduates) program awards ten science, engineering, and mathematics undergraduates summer internships to conduct guided research in marine science. Students between their junior and senior years will receive preference. Applications from women and members of minority groups are especially encouraged. Interns will work with faculty and research staff in a graduate student atmosphere on a research topic in chemical, physical, or biological oceanography, marine biology, marine geology, or marine biochemistry. Interns will work semi-independently on a project designed by the intern and assigned faculty advisor.

Website: <http://www.ceoe.udel.edu/academics/for-current-undergraduates/marine-sciences-summer-program>

REU at University of Michigan: Interdisciplinary Program in the Structure and Function of Proteins

The University of Michigan Interdisciplinary REU Program (Research Experiences for Undergraduates) in the Structure and Function of Proteins is designed to provide undergraduate students with a 10 week research experience in the areas of biochemistry, biophysics, cheminformatics, computational chemistry, enzymology, marine biology, molecular biology and plant biology. The research projects featured in this program all involve studies of the structure and function of proteins. REU Faculty Mentors represent the departments of Biochemistry; Chemistry; Medicinal Chemistry; Molecular, Cellular and Developmental Biology; Pathology, Pharmacology and Pharmaceutical Sciences.

REU at University of Virginia: Independent Field Research in Ecology, Evolution and Behavior at Mountain Lake Biological Station

Mountain Lake Biological Station's Research Experiences for Undergraduates program is sponsored by the National Science Foundation, and brings undergraduate students from around the country together for an exciting 10-week summer program of guided, but independent, original research in field biology. Student researchers work closely with researcher mentors in compatible fields of interest. Students take leadership roles in all aspects of the study; they design the study and prepare the proposal, collect data and perform analysis, and interpret the results and prepare a written and oral presentation. Compared to many other REU programs, this one offers a high degree of independence in project choice and design.

Research in Science and Engineering at Rutgers/University of Medicine and Dentistry of New Jersey

Rutgers, the State University of New Jersey, is ranked among the leading research universities in North America. The University of Medicine and Dentistry of New Jersey is the largest public health sciences university in the country. These two institutions, which conveniently share a flagship campus in central New Jersey, offer many joint programs of study. The campus is also home to the Robert Wood Johnson Medical School that offers an M.D./Ph.D. option. They boast a world-class faculty whose research spans diverse areas of intellectual inquiry in the sciences and engineering, including cutting-edge interdisciplinary fields such as bioinformatics, proteomics, neuroscience, and nanotechnology.

Seaver Undergraduate Research in Biology

The biology department at Pepperdine University conducts a summer research program geared specifically to undergraduate students at the sophomore and junior levels. The faculty will conduct a 12-day research orientation workshop (May 12-May 24). During the workshop, students will be introduced to the uses and limitations of specific research tools and techniques. The workshop will culminate with a visit to the James San Jacinto Mountains Reserve near Idylwind, California and the presentation of student proposals for summer projects. Over the remainder of the summer, students will pursue individual research projects under the direction of faculty. Visiting scientists will hold special research seminars in each research area. The research program will conclude with a student research symposium in late July in the new Keck science facilities.

University of Arizona Minority Health Disparities Summer Research Opportunities Program

The University of Arizona Graduate College is offering summer research opportunities focusing on health issues that affect minority communities in a disproportionate manner and specifically research involving pulmonary, heart and vascular, and blood diseases and disorders. Underrepresented undergraduate rising juniors and seniors in majors leading to biomedical careers will engage in specific research projects at the University of Arizona under the supervision of faculty conducting research on minority health issues. Students will also present their research at the summer colloquium attended by faculty, graduate students, family, and friends. The research objectives of the program are substantial and will require students' full-time commitment.
