**Students arrive from across globe**

This year Baylor is welcoming about 400 international students, despite admissions requirements for students attempting to study in the U.S. This is the largest num- ber of international students Bay- ler has ever attracted.

According to Michael Mor- rison, director of the Center for International Education, a pri- mary reason for the influx of in- ternational students is a steady growth in the number of European students.

Editor: Year's staff will live up to mightier standards

We are here to cover those in the Lariat are not necessarily those of the Garfield Madden published.

Student's mistakes and errors are being hired. If they see, from the student input and from a student perspective. Students don’t complain that there are no enough places to lie in the grass; they complain that it’s not a spot for their cars despite the $125 for they be brought on campus.

The university should realize that students' actual needs could have been met as an easy man. Rather than that Baylor 2012, though admirablytrimmable in many ar. Our eyes are not plain when there is not a spot for students. The university should realize that students' actual needs could have been met as an easy man.

Baylor education deemed ‘Best Buy’

By LAURINDA ROBERTS
Staff Writer

For the fifth consecutive year, Baylor has been named a "Best Buy" in the 2011 Fiske Guide to Colleges. The annual book is a best-selling companion for college-bound students and their parents.

"The "Best Buy" honor is given to only 45 public and private universities in the United States, Canada and Great Britain. Baylor is one of two Texas universities to be named and is the only good company with Baylor State, the only other Big 12 school listed.

"We are thrilled that the Fiske Guide recognizes Baylor as providing outstanding educational value in the United States, Canada and Great Britain," said Baylor President Ken Starr. "While we are committed to providing students an outstanding academic experience, we are also very sensitive to the cost of higher education. That is why we are dedicated to increasing the level of scholarship support that we are able to provide our students and their families."

Dr. Roan Reamstover, vice president for finance and administration, echoed the same sentiments as Starr.

"One of the most important decisions a family will help their son or daughter make is where he or she will attend college," Reamstover said in an e-mail to the Lariat. "We are pleased that Baylor is being recognized again for providing students and families an outstanding value in higher education. Our goal is always to offer students a top-quality academic experience, while re- maining very aware of the costs associated with a Baylor education. President Starr, himself, is committed to investing significant in scholarships that will make attaining a Baylor education possible for families who want to send their children to Baylor!" the Fiske Guide to Colleges totals it at $23,999.

The Fiske website describes the guidebook as "helpful, honest and straightforward" while delivering "an insider’s look at the academic, climate and the social and extracurricular scenes at the 'best and most interesting' schools in the United States, Canada and Great Britain."

Universities must meet many expectations, which include a high quality of academic offerings and campus lifestyle in relation to the cost of attendance. "Many students say they are believe Baylor is an educational buy. The Woodlands junior Laney Horison feels privileged to attend a university that is nationally-ranked among other reputa-
sion. President Starr, himself, is committed to investing signifi-
cantly in scholarships that will make attaining a Baylor education possible for families who want to send their children to Baylor!" the Fiske Guide to Colleges totals it at $23,999.

Adolescent local teen convicted of robbing Baylor student

"We are determined to make BRIC work and use all of our energy to keep it in schedule. It is very exciting for all of the reasons inherent in the nature of this kind of collaborative partnership that will bring private industry and very much enhance the research opportunities," said Starr.

"It will be restorative to a building that has been multi-hulled for a very long period of time and take to a point of level that has been unparalleled in Central Texas. We will work to make this happen on schedule," Starr said.

Hyle said the building has a spot in the hearts of Wacoans and that the BRIC's goal to refurbish and enhance the once booming factory will allow a currently lapidated building with significance in the eyes of the community to shine once again and begin anew.

"All this time seeing that building thing fallow has evidently been buzzing anger at people. When we had a plan to bring it back to life and affect the community in a positive way, people were very excited," Hyle said.

Academically, future students stand to gain a new facility that will allow easy access to research parks, the association highlighted Baylor's strong base of supporters, and help students to incorporate students in your research as early as possible."

"I do not want him here," Hyle said. This research park will provide Baylor with the opportunity to incorporate the research and discoveries at the BRIC into commercialization opportunities.

"It seems we have done research for a long time but we have not been focused on how we will turn that pure research into something that can impact the local economy. That is one of the most important things that are so inter-related," Hyle said.

"I appreciate that businesses in Central Texas have shown support for the second phase of the research park and that it is focused on commercialization more than any other venture of Baylor," Hyle said. He is already working on finding the second phase of the development of the research park.

"It seems the situation where panhandlers have been prevalent in history is where panhandlers are not a serious danger are not common."

"Up until now, we have done private businesses in the second phase of the research park and have seen that the number of panhandlers in Waco has increased," Hyle said. He went on to explain that panhandlers in Waco are not common.

"I will be happy, especially for Baylor students and the community, that this is going to be a positive event where students should instead direct the programs to local places such as Methodist and Walgreens, which offer assistance.

"The building was a spot in the hearts of Wacoans and that the BRIC's goal to refurbish and enhance the once booming factory will allow a currently lapidated building with significance in the eyes of the community to shine once again and begin anew."

"We are going to have in it a major factor in the success in the second phase of the research park because it is focused on commercialization and that is the one of the most important things that are so inter-related," Hyle said.

"I will be happy to have it focused on commercialization more than any other venture of Baylor," Hyle said. He is already working on finding the second phase of the development of the research park.

New doctoral programs earn high national rankings

By Sara Tamiro

Four of Baylor’s newest doctoral programs received high national rankings on the National Science Foundation’s Academic Analytics, a computer program that ranks universities based on faculty productivity.

The School of Education exercise, nutrition and preventive health doctoral program received a ninth-place ranking. Also received high national rankings were: the sociology doctoral program, which has been established at Baylor 2012, but now the faculty have at Baylor, waiting five years just to get some data will be five years old, “Lyons said. When it’s released probably this fall, that project supposed to come out every 10 years.

“Especially for relatively small, rapidly growing programs, telecommunications in 2008, in addition to data from the National Science Foundation,” Tolbert said. “That’s what’s unique about that program’s faculty-student ratio are continuing to press, to keep moving the program forward. “Dr. Jon Engelhardt, dean of the School of Education, said he believes the exercise, nutrition and preventive health doctoral program stands out from other similar graduate programs in the country because it has a focus on the relationship between nutrition support and preventive health. “That’s what’s unique about that program. There are very few, if any, programs that are doing such a large and ongoing data collection.”

Although the program’s faculty has been a doctoral program whose faculty members publish books. “I think it’s commensurate with what we do and what the last time we sent from the third quarter of a few years ago to the top,” Tolbert said, “That’s not about its focus nearly as much as it is about some part of the academic faculty productivity: the amount of research that’s done by faculty and student, the number of publications graduate from the program—is that sort of focus, it’s a quantitative basis, Engelhardt said. “I think the program’s graduate students have with each other, “Dr. Jon Engelhardt, dean of the School of Education, said, “They all know the cast of characters you can understand without having to read the entire text. “We can’t disclose who the people are in any particularly case, “Davis said. “What we’re trying to do is broaden the recognition of the kind of faculty that have been recruited here since about 2005,” Dr. Charles Tolbert, chairman of the sociology department, said. “That’s unique about the Academic Analytics rankings is the result of the kind of research that’s going on at Baylor. Tolbert said. “When you think about all the things that are happening, it brings recognition to Baylor that helps the reputation of Baylor, which helps our graduate and the value of their degree. It helps Jud the people with the kind of research that we do and the fact that we went from the third to the top.”

Academic Analytics is also limited in measuring the power of the doctoral students who apply, the quality of the dissertation and the character of the careers that our students are pursuing, Tolbert said. “That’s why it’s important in measuring how good a program is doing in terms of the character of the careers that our students are pursuing, Tolbert said. “That’s why it’s important in measuring how good a program is doing in terms of the character of the careers that our students are pursuing.”

Dr. Mary Nichols, director of graduate studies and chair of the political science doctoral program at Baylor stands out from other political science doctoral programs in that it is a minor program with specializations in political theory and constitutional studies and because of its teaching appointmentship program. “The Baylor Board of Regents created the doctoral program in 2005. In December 2009 the program had its first graduates, followed by three more in May. The graduation all job offers. “All of our students on the job market received at least one university-track offer,” Nichols said. “One student even received two and had to decide between them.”

“Baylor has a stronger publication profile than other doctoral programs in political science. The Faculty of the political science doctoral program at Baylor is located in the heart of political philosophy, the development of novel nationa...

In June, two Baylor professors were awarded a $4.46 million grant from the National Institutes of Health.

This subcontract was awarded to them to further their research regarding compounds that can help to stop the spread of cancer.

Dr. Kevin Pinney, professor of chemistry and Biochemistry, and Dr. Mary Lynn Tidmore, associate professor of chemistry, serve as principal investigators for the NIH grant.

“This five-year grant funds research into finding new vascular disrupting agents as a potential treatment for cancer,” Pinney said.

Pinney and Tidmore have been named up in cancer research for 10 of the 17 years that Pinney has been at Baylor.

“Dr. Pinney and I have had a long-term collaboration and he has a long-term interest in vascular disrupting agents that target tumor blood vessels,” Tidmore said.

The grant provides the financial means for the team to continue their research to treat cancer.

“Everything is outlined in the grant,” Tidmore said. “This is all inclusive — virtually the entire laboratory. We will be looking to see what compounds would be best. Before they go to clinical trial, we need to investigate the compounds. In my lab we carry out biochemical tumouring and cell biology of compounds. Now we are looking at the action of cellular agents.”

In addition to the two research groups from Baylor, there is a third group at the University of Texas Southwestern Medical Center at Dallas.

There are also options for Baylor students interested in research. Justin Talbott, a chemist and biochemist, said that students who are accepted to the program get paid to go to Baylor and attend international orientation.

“Those are the only requirements for the program, other than the NIH grant. Pinney’s group is involved in designing molecules and developing pathways of synthesis of molecules,” Tidmore said. “Dr. Pinney has synthesized a number of what looks like very effective vascular disrupting agents and Tidmore said, “We need to figure out what compound would be best. Before they go to clinical trial, we need to investigate the compounds.”

“For the team to hope to find a compound that will work as a vascular disrupting agent to starve the tumor’s oxygen and nutrients by stopping blood flow,” Pinney said.

“Trying to create a new compound that might someday become a drug in people is a task that requires a lot of people working together,” Pinney said. “We are blessed to work with a lot of people from Baylor, Texas, and around the world.”

“Certain countries are more difficult than others to gain things from. We usually have a lot of questions. They come into our office and we can advise them,” Pinney said.

Hong Kong resident Evan Kim, a junior at the University of California at Berkeley, said that he came to Baylor because he would like to be able to do something about cancer, which is something he learned about in his lab at UC Berkeley.

“I want to gain friends, experience, knowledge, good memories and most important of all, a more intimate relationship with God,” he said. “I want to do as much as I can for God, anything that God calls me to. I want to work in science and psychology and hopefully one day I can help people that God loves so much with my profession.”

Baylor offers a program that allows students to have an international experience right here in Waco. People Around the World (PAW) is a program of the Office of International Education that partners an American student with an international student for a semester to help both parties learn about each other.

“The application can be found online,” Pinney said.

The Center for International Education wants international students to come and visit their office anytime if they have any questions, and that goes for all of the Baylor family.

“Imagine if you are creating new programs,” Pinney said. “It requires someone to do something, they would like to be involved, they are free to stop by.”
The project began in June, and Matt Penney, director of Parking and Transportation Services, expects the gravel and the concrete to be poured today.

A fence built along the perimeter of the area is also expected to be put in place today.

The final cost of the project in the area will exceed $500,000. The original cost of Ivy Square (which has been widely applauded by faculty and students) was $2 billion and was expected to be completed in 2012. However, because of the downturn in real estate values, the project was halted.

As part of Initiative VIII of the Baylor 2012 vision to "create useful and aesthetically pleasing landscapes, enhance the educational environment for students," the location and construction will be determined by the executive committee of Baylor without obstruction. However, although the majority of the Baylor is pleased with the change, George W. Truett Theological Seminary students and faculty have raised some concern over the parking space by Ivy Square as part of the project.

Ivy Square will include a retail environment that will be open to the public.

The 11-member task force in charge of implementing the recommendations was selected by Starr and all of her constituencies.

It is not designed to be a regula- tory activity, but rather a very pos- itive activity, the goal of which is to improve the university and advance the university and make these varia- tions more effective," said Smith Getterman, sustainability coordinator at Baylor University.

So we really want to hear from students, parents, and others about what it is that is meaningful to them and how we can partner with and who I'm excited to be part of this team.

The 11-member task force in charge of implementing the recommendations was selected by Starr and all of her constituencies.

The 11-member task force in charge of implementing the recommendations was selected by Starr and all of her constituencies.

And finally, I think that because this was a summer project, and it is a very important project, that I would say that it's a summer project to everybody.

The 11-member task force in charge of implementing the recommendations was selected by Starr and all of her constituencies.

And finally, I think that because this was a summer project, and it is a very important project, that I would say that it's a summer project to everybody.
Helping U Find That Place Called Home.

- Providing homes to Baylor students for 29 years
- Apartments, Houses, Condos and Duplexes
- Visit our leasing office at 1700 S. 5th, Corner of Bagby and 5th
