

# GRADUATE ASSISTANTSHIPS IN ENVIRONMENTAL SCIENCE

The Department of Environmental Science at Baylor University is accepting applications for Ph.D. graduate assistants who are interested in our dynamic and growing department.

Students mentored by faculty in the environmental sciences at Baylor routinely engage in interdisciplinary research projects. Collaborative research is ongoing on several continents. Faculty expertise includes water and air quality, environmental toxicology and chemistry, risk assessment, applied ecology, climate change, and environmental management. Student research projects often integrate across multiple disciplines, involve laboratory, and field studies, and examine factors that influence public health and environmental health.

State-of-the-science laboratories, core research facilities, and instrumentation are available in the Baylor Sciences Building ([www.baylor.edu/bsb](http://www.baylor.edu/bsb)).

Successful candidates will receive competitive stipends, health insurance and other benefits, including a full tuition waiver.

*Application deadline for Fall 2023 is 15 February 2023 for priority consideration.*

*Prospective students should contact graduate faculty mentors prior to applying. Applications are accepted at: <https://grad.baylor.edu/apply/>*
