Retention and Graduation Rates of Doctoral Students Fall 1991 – Fall 2005

This report contains information on the retention of doctoral students at Baylor University. Doctoral students have a maximum time limit of ten years to complete the doctoral program, and any extension of the time limit must be approved by the Dean of the Graduate School. Even though some students take the full ten years to complete their program, the majority of doctoral students finish within seven years from the time of entry.

For the purpose of this report, entering doctoral classes for the previous ten years were studied to determine retention, attrition and graduation rates. All doctoral students were considered together as a group, and there was no differentiation between PhD, EdD or PsyD students.

Since the size of incoming classes are relatively small, there are issues that must be considered when doing any type of retention study. Semester data is 'frozen' on the official census day of the semester. If a student registers or completes financial registration after the census day, he or she would not be included in the data, and thus would appear as a 'leaver' when actually they continued to be enrolled.

Graduation Rates

<i>What percentage of first-time doctoral students graduate in <u>four</u> years?</i>	31%
<i>What percentage of first-time doctoral students graduate within <u>five</u> years?</i>	44%
<i>What percentage of first-time doctoral students graduate within <u>six</u> years?</i>	50%
<i>What percentage of first-time doctoral students graduate within <u>seven</u> years?</i>	56%

Details for each incoming class can be found in the table on the following page.
