There are three types of productive reviewing when preparing for tests: (1) a daily review of material will help you remember material you have just studied; (2) summarizing material; (3) a comprehensive review will assist in integrating concepts and making connections so that there is a deep understanding of the material prior to the test.

The greatest benefit of reviewing is that facts have time to "roam around in your head" and create relationships that show up when needed. A great deal of learning can take place when you are not even "studying." Another beneficial key to test preparation is managing your review time. A great way to do this is to create a list of all material you need to cover on that day. As you study, anticipate what material will be covered on the test and write it down. Organize your notes and other study aids to correspond with the study. Anticipate what material will be covered on the test and write it down. Organize your notes and other study aids to correspond with the test.

To help you develop an effective study plan, here are five tips to achieve greater study success:

1. **Test Your Knowledge Before Testing**: During your tests to make you more successful!
2. **Gather the Facts**: Organize and prioritize the information you need to know.
3. **Gather the Facts**: Organize and prioritize the information you need to know.
4. **Gather the Facts**: Organize and prioritize the information you need to know.
5. **Gather the Facts**: Organize and prioritize the information you need to know.
